

IBC range for the chemical industry

Type 410 – Standard IBC

A choice of 500 or 1,000 litre units available. Cylindrical stainless steel tank with 400 mm manhole and screw lid. Outlet allows connection of different couplings. Suitable for optimal transportation and storage of lubes, solvents and many other products.

Type 400 – Special IBC

Specially constructed for the high requirements of the automotive industry. Equipped with a 457 mm manlid and clamping ring. Outlet with 3" camlock coupling. Available in 500 or 1,000 litre volume.

Type 420 – Cubic IBC

In opposition to IBC type 410 a cubic type of construction. Available with a volume of 500 and 1,000 litre.

Type 433 / 434 – Electrically heated and insulated IBC

1,000 litre IBC with screw lid. Additional heating system and insulation allow transportation and storage of tempered liquids (e.g. paraffins, adhesives, polyols or fatty alcohol). 2,000 Watt power supply. Maximum working temperature of 120 °C. Schuko plug (type 433) or CEE-plug (type 434).

Type 460 / 465 / 468 / 490 – Aseptic container

Aseptic container for transportation or storage of liquid pharmaceutical products and cosmetics. All types have a screw lid. Available in 1,000 litre (type 460), 800 litre (type 468) and 500 litre (Type 465). Approval for dangerous goods available (type 490).

Type 470 – Agitator

Available as additional equipment for IBC types 410 / 433 / 434. Twin blades avoid sedimentation of the product and ensure a constant temperature distribution within the IBC. Simply clips onto the manlid of the IBC. Delivery in a secured and closed transport box.

Please ask for our **Technical Data Sheets**. You will receive technical drawings and other relevant information. Tick the box stating your favoured data sheet and fax it back to
